RIVERSIDE CHRISTIAN COLLEGE	**POLICY LOCATION:** Staff Policies and Procedure
	POLICY NUMBER: IM004
	POLICY AREA: Information Management

POLICY TITLE: Artificial Intelligence (AI) Usage Policy for Staff, Teachers and Students

1. PURPOSE

Riverside Christian College is committed to an educational philosophy that encourages all students to achieve personal excellence by developing their talents and abilities. This policy is designed to outline the responsible and beneficial use of Artificial Intelligence (AI) at Riverside Christian College. AI offers numerous educational opportunities as well as workload reduction for both staff and students. This policy aims to guide its integration in a way that enhances learning and workflow while also upholding ethical standards, student welfare and authenticity of assessment.

2. SCOPE

This policy applies to all staff, teachers and students at Riverside Christian College. This policy outlines the extent and acceptable use of AI:

- By students
- With students
- For communication and workplace workflow.

3. POLICY STATEMENT

3.1 AI limitations and restrictions for all employees

When using AI tools in the workplace, employees should only use approved AI Tools. The following have been approved for employee use:

- ChatGPT (excluding College booklets)
- Diffit (excluding College booklets)
- Turnitin
- Grammarly

Employees should only use AI Tools for the following job functions:

- Drafting internal and external communications (no names or personal details permitted and no upload of information into the AI permitted)
- Drafting general communication including marketing materials and newsletters (no names or personal information permitted)
- Grammar and spelling check for editing of communications internal and external
- Research support
- Lesson Ideas and lesson planning support
- Question and Answer ideas and support
- Take work and increase or decrease the level of difficulty, re-wording etc.

- Creating study guides or multiple choice quizzes, or step by step instructions.

In certain cases, when AI tools involve data collection or access to student information, parental consent is required. Riverside Christian College is committed to protecting its employees and students' data and privacy. If teachers wish to use AI tools for students to independently access and use, approval should be sought by the relevant Deputy Principal.

Copyright considerations

Labelling and attributing

Employees must comply with licensing terms and conditions for AI-generated content. It is recommended that employees familiarise themselves with the terms and conditions of each generative AI platform.

For new works, some AI tools assign copyright in the output:

- to the user – for example, employee or organisation, or
- only grant a licence – for example, Creative Commons licence.

Producing a modified version of an existing third-party work to make materials more accessible to students, should only be done:

- if an education licence or exception in the Copyright Act applies, or
- with permission from the copyright owner.

The modified material should be labelled under the educational provisions of the Copyright Act.

All AI content in the reference list should reflect the criteria for new or modified works in the attribution.

Example for new works

<u>Copyright assigned to the user:</u>

This work has been generated using artificial intelligence. Any copyright subsisting in this work is owned by [INSERT owner or owning body].

<u>Copyright licence:</u>

This work has been generated using artificial intelligence. [INSERT licence (e.g., Creative Commons licence)].

Example for modified version of an existing third-party work

This version has been generated using artificial intelligence and has been copied/made available to you under the educational provisions of the Copyright Act. Any further reproduction or communication of this material by you may be the subject of copyright protection under the Copyright Act. Do not remove this notice.

Further information

For further information see Using Generative AI Platforms in Schools on the Smartcopying website.

3.2 Employee use of AI

Additionally, the following rules and regulations will apply when using AI:

- The employee should log into AI Tools with their organisation-provided email address.
- The employee should not enter any confidential information or trade secrets (including personal/proprietary information) into an AI Tool unless approved in writing by the employee's supervisor.
- Employees should not enter any offensive, discriminatory, or inappropriate content into an AI Tool.
- Employees should closely review any output generated by the AI Tool before using it or forwarding it to anyone else (whether inside or outside the organisation). This should include reviewing that AI has not generated any content in violation of the employer's policies, or copyright law, and that no confidential information has been disclosed and that the information generated is accurate.
- Employees should allow the AI Tool to track their prompt history. Prompt history should not be erased or tampered with.
- Employees should not use AI to conduct, engage in or solicit illegal activities.
- Employees should be aware of and respect copyright laws.
- Employees should not use AI alone to make decisions. This includes decisions regarding the hiring, discipline, suspension, termination, promotion, demotion or salary increase/decrease of employees. AI should not be used to evaluate or conduct performance reviews.
- Employees should not use AI on College publication materials including educational booklet materials.
- Employees should not input personal information into AI, whether their own or that of a co-worker, client, customer or contractor.
- Employees should not represent AI work as their own.

3.3 AI use by Students

The use of AI by students for assessment must not compromise the authenticity of their response. AI tools should not encourage shortcuts or undermine the integrity of assessment processes. Where AI is permitted to be used by students for assessment, it must not be for aspects of a task formally evaluated using the marking guide.

Riverside Christian College Assessment Policy sets out expectations and consequences for students with relation to academic integrity. This policy can be found on the College website.

Extent and acceptable use of AI by students

The following must be satisfied for AI to be used by students:

- Students must not use AI to generate responses to assessment tasks as this is considered plagiarism which is a breach of the Assessment Policy.
- Students must use AI tools in accordance with teachers' instructions and educational purposes.
- Teachers must provide consent if AI tools involve data collection or personal information sharing.
- Responsible and respectful behaviour is expected when interacting with AI-generated content.
- Students should adhere to data protection and privacy guidelines and seek guidance when unsure.
- Students must check the accuracy of all information generated by an AI to ensure it is accurate and correct.

- Ethical considerations, such as proper attribution and fair usage, must be applied to AI-generated content. This applies to any information generated by AI including, but not limited to, text, images, video, and audio.
- When permitted to use AI by their teacher, students must attribute AI-generated information where an AI tool has been used in ways that do not compromise the authenticity of assessment. Find guidance on citing AI- generated content below.
- Students must produce a transcript of cited material from Generative-AI upon teacher request to verify the accuracy of their citation.

AI tools can support student learning in a variety of ways so long as this use does not compromise the authenticity of assessment. If the conditions set out above have been satisfied, students may use AI to:

- Support them in brainstorming general ideas that do not lead to a predetermined response
- explain information in different ways to help their understanding
- create a study timetable or program
- test their knowledge or prepare practice questions
- combine information from different sources
- general research
- paraphrase information
- learn about critical thinking
- generate images for use in a short story.

This is not an exhaustive list of uses of AI by students. Uses not represented in this list should be evaluated by the teacher before students engage AI as a learning tool.

3.4 AI use with students

The purpose of integrating AI into student learning is to enhance educational experiences, foster critical thinking, and prepare students for the digital age. AI tools can empower teachers to become facilitators of learning in innovative ways.

Extent and acceptable use of AI with students

AI should be used judiciously, enhancing education without diminishing the value of human interaction. AI should complement traditional teaching methods and not replace essential teaching roles. Responsible use of AI with students entails providing appropriate guidance, educating students about AI's limitations and benefits, and fostering critical thinking skills to evaluate AI-generated outputs.

The following conditions must be satisfied for AI to be used with students:

- AI tools must align with the planned curriculum and support student learning.
- The use of AI must ensure student privacy and comply with data and child protection regulations.
- Generative AI tools are used in ways that are inclusive, accessible, and equitable for students with disability and from diverse backgrounds.
- AI-generated content should be integrated in a way that enhances traditional teaching methods and student engagement.
- AI-generated content must not compromise the authenticity of assessment tasks.
- Ethical considerations such as algorithmic bias, transparency, and fairness must be taken into account. Teachers should guide students in understanding the potential implications of AI-generated decisions.
- Licensing and copyright implications for AI-generated content should be taken into account. Teachers and students should ensure proper attribution and referencing of AI-generated work and be aware of the copyright requirements associated with AI.

- Teachers using AI tools should be mindful of technical aspects, including secure login, responsible account creation, and appropriate sharing of information generated by AI.
- Teachers and students should understand the data being collected, how it is processed, and the purposes for which it is used. Transparency about data usage ensures informed participation.

Using AI to improve learning
AI technologies, such as adaptive learning platforms, data analysis tools, and virtual tutors, can be employed to personalise learning experiences and provide valuable insights into student progress and needs.

Teachers may use AI during lessons with students. This can be done via screen sharing with the teacher having access to the AI tool rather than students.

AI can be used to engage students in critical thinking. Examples include but are not limited to AI:

- leading a Socratic questioning dialogue to review the knowledge and understanding of a topic
- creating study guides for reviewing a topic
- generating model responses for students to collaboratively mark using a marking guide
- evaluating exam-style questions students have written
- providing critical feedback on student writing in a lesson
- creating flashcards for definitions and key terms
- generating images based on student creative writing so that students can evaluate and improve the use of imagery in their short story
- providing non-examples for students to evaluate
- brainstorming ways to respond to a task.

Using AI to differentiate learning
AI can be employed to tailor learning materials to individual student needs and learning styles, fostering a student- centred approach that supports diverse learning pathways.
AI can be used to adapt learning materials for students working below level. For example, a text intended for a Year 7 audience can be adapted by AI for a student with a reading level two years below their like-age peers.

Referencing expectation for AI platforms
As generative AI produces material that is not recoverable, the material itself cannot be cited — but since it is not information communicated by a person, it cannot be treated as personal communication.

Instead, a reference in-text to the use of the software is needed along with a citation to the software. If using content generated by the software, use quotation marks or a block quote just like any other quoted text.

Examples of text generation
<u>In-text:</u>
ChatGPT was used to summarise the results of the articles, and found there was "no statistically significant difference between the two methods" (OpenAI, 2024).

<u>In the reference list:</u>
OpenAI. (2024). ChatGPT (Mar 14 version) [Large language model]. https://chat.openai.com/chat

Example of text-to-image generation
In-text:
Image of robot holding a flower generated using ChatGPT (2024).

In the reference list:
ChatGPT. (2024). ChatGPT [Text-to-image model]. https://chatgpt.com/g/g-c8rPAhJRP-image-creator.

3.5 Reporting Non-Compliance with This Policy

Employees who know of an actual or potential violation of this Policy should immediately report such violation to their line manager. This includes the following:

- Use of an AI Tool that has not been approved for use according to this Policy.
- Use of an AI Tool for a task or project that is not authorised by this Policy.
- Use of an AI Tool that poses an identified, unaddressed security risk or contains
- any material defects or malicious code.
- Use of an AI Tool that violates any other college policy.

Violations of this Policy
If the employer determines any employee has engaged in conduct in violation of this Policy, they will be subject to discipline as per the college Developing Staff Performance Policy.

4. DEFINITIONS

Artificial Intelligence: Artificial intelligence refers to the ability of systems or computers to do things that would normally require human intelligence. AI is used in many products and services we use daily, from search engines to smartphone assistance.

Generative AI: Generative AI can understand instructions and produce or deliver meaningful content. It uses the data it was trained on to generate new data that has similar characteristics. Generative AI products are widely available, and they are expected to keep changing and improving quickly.

5. RESPONSIBILITIES

Areas of Responsibility	Person Responsible
• To ensure that they use AI in the ways specified in this policy. • To ensure that they guide students to use AI in the ways specified in this policy.	Teachers
• To ensure that they use AI in the ways specified in this policy.	Employees
• To ensure that they use AI in the ways specified in this policy.	Students
• To ensure that all employees and students use AI in the ways specified in this policy.	Deputy Principals
• To ensure that all employees use AI in the ways specified in this policy.	Line Managers
